# SIEMENS

As part of a planned reinforcement of the management in the engineering organisation, including Generators, the area is expanded by a staff function. It is a significant area of responsibility where you will be involved in the managerial deliberations and activities.

Your area of responsibility is portfolio management of the next generation's generators, including monitoring overview and insight in the various projects. You will have a large influence and will be a permanent member of the steering committee for generator development. Going forward, there is a possibility to extend your formal area of responsibility with a PA role, focusing especially on strategic sparring.

Your first task will be to establish a strategic overview and subsequently define a platform and starting point. Based on the managerial reflections, you will become project manager of selected business activities with ongoing reporting to top management. Other significant tasks are development and maintenance of a technology roadmap, as well as being a sparring partner for Global Supply Chain in connection with technology and product launches. There will be close collaboration between the various fields in Engineering, as well as with the remaining business units in Siemens Wind Power and with subcontractors.

You will take on an important but challenging task. Initially, you will be measured on your ability to create relations and network throughout the Danish organisation while establishing an overview of technology and product launch plans for production and

supply chain - and in the long run, you are expected to transfer it to a global scale.

You probably have a background in engineering supplemented by a commercial degree and extensive experience from a technology advanced international organisation. You have extensive experience with business analysis, project management and implementation of technology and product development initiatives in supply chain and with subcontractors. You are fluent in English.

The key elements of your personality are strong analytical skills, solution oriented, a profound overview, a strategic mindset and extrovert. You are structured and proactive, and embrace the management role in projects and different tasks. You demonstrate excellent communication skills and you have a great drive and personal need to deliver on a high professional level.

Siemens Wind Power offers exciting challenges and international career opportunities in an innovative, global company at the leading edge of green technology. The working environment is open, inspiring and international, and provides great opportunities for personal and professional development. Salary and employment conditions are negotiated individually at an attractive level.
