

SOFTWARE TEST ENGINEER

SET NEW STANDARDS FOR SOFTWARE TESTING AND QUALITY ASSURANCE – DEVELOPMENT

Our client is an international company and a leading player in the fields of research, development and production within a broad spectrum of industries.

The company is the market leader in specific areas and its ambition is to supply the most energy-efficient and effective quality products for indoor climate comfort.

Our client wishes to strengthen its software quality assurance processes for its main products. The R&D/Competence Centre in Vejle employs 80 people and is at the cutting edge of control systems and software development. It aims to be a market leader in products and technology, where Reliability is a strategic focus area.

For this newly created position, we seek a person who will take responsibility for the execution of software testing and ongoing development, and who will drive the software testing and quality assurance processes and methodologies for “the next generation of indoor climate control”.

You will be part of an efficient and highly skilled team of 15 people, whose approach relies on trust and openness. You will be part of development projects with a broad interface – both nationally and internationally.

You will have a broad range of tasks, ranging from the execution of software testing and subcontractor assurance to the preparation of test cases, and testing management and coordination.

You are a qualified engineer with a background in computer science or equivalent, ideally specialising in software quality assurance. You have at least three years experience with practical software testing and quality assurance and are familiar with

the V-model. You have gained an excellent understanding of your field from your experience in testing and you contribute with strategic input relating to the quality assurance of software.

Projects, collaboration and the ability to create professional relationships are the basis for the success of each task, and therefore you must have an excellent ability to integrate yourself into different functions and cultures. You are a skilled analyst and your positive approach ensures initiatives to improve quality and Reliability are implemented and firmly rooted. The position requires that you are able to deal with an extreme level of complexity. Up to 20 days of annual business travel is expected.

This position offers attractive salary and employment terms. The corporate language is English.

If you seek professional challenges and want to set the agenda in Reliability and software quality, then send your application to job@frontpeople.dk, marked: “STE711”. Candidates will be interviewed in calendar weeks 33 and 34.

If you have any questions, please contact us on +45 75 19 19 38.
