SIEMENS

Siemens Wind Power A/S wishes to strengthen the management of the quality area within product development. Quality is considered a strategic focus area and is fully supported by top management. Reporting to the Director of Product Integrity, you will be responsible for defining and establishing the department's role and mission, and you will be a core member of the steering committee for development projects.

You will view the department as a competent facilitator and the link between wind power technology of the future, and performance for reliability and quality.

You will develop and implement the reliability concepts/programs, standards and methods that enable development projects to be carried out in an effective and qualitative manner. The management task will be to expand the current five persons' team, consisting of competent project managers and experts (process excellence, Six Sigma, Lean, QM/FMEA etc.).

Based on data analysis and simulations, you will secure that action is taken in terms of preventive activities, including knowledge gathering. You will guarantee that possibilities for improvement are implemented in the development organisation and the development projects. Going forward, the success criterion is a minimization of errors and warranty cases in general.

You are not necessarily an expert within this field, but you have a proven track record and experience from similar management positions. You are comfortable managing and

operating in complex matrix organisations, and you have considerable experience managing projects in a multi-cultural knowledge-based technological environment. Experience from a major R&D unit or warranty department in a large international concern will be relevant.

You operate comfortably at all levels of the organisation, have exceptional analytical skills and demonstrate excellent communicative skills - you are a natural networker. As a manager you are confident, and on account of your coaching and motivating leadership style, you ensure that the R&D organisation implement and anchors initiatives that improve quality and reliability. You must be able to handle highly complex projects and situations, and you are proficient in English.

Siemens Wind Power offers exciting challenges and international career opportunities in an innovative, global company at the leading edge of green technology. The working environment is open, inspiring and international, and provides great opportunities for personal and professional development. Salary and employment conditions are negotiated individually at an attractive level.
